DRIVEWAY SPECIFICATIONS

Township Trustees

Sugarcreek Township

1. A driveway permit is required for any new driveway and a representative from the Sugarcreek Trustees must approve of the location prior to permit being issued.
2. All driveways must slope down from edge of pavement 1" per foot for a minimum of 8 feet or to a point 2 feet behind ditch line before slope is started up grade or down grade.
3. Any driveway above the Township Road must be crowned and ditched to assure the water coming down drive doesn't go into the Township Road. An excessive grade may have to be broken to slow the water down. Also, dumped rock may be required for ditches.
4. Size of culvert to be installed will be determined by the Township with a minimum size to be 12" diameter. If there is ditching needed adjacent to the drive, the Township will perform this work. Length of pipe must be minimum of 20 feet.
5. Driveways must be covered with aggregate prior to being used far enough to eliminate mud being carried onto the Township Road.
